Solar details

System size
12.18 kW DC

Panels
MSX10-435HNOB

Inverters
IQ8AC-72-M-US [240V]

CEC-AC rating
10.429 kW AC

Estimated First Year Production
18,748 kWh

Consumption Offset
104%

Array details

Panel: MSX10-435HNOB

Quantity: 22	Watts: 435	Azimuth: 217° (SW)	Tilt: 18.43°	Mounting: flush
--------------	------------	--------------------	--------------	-----------------

Panel: MSX10-435HNOB

Quantity: 6	Watts: 435	Azimuth: 219° (SW)	Tilt: 18.43°	Mounting: flush
-------------	------------	--------------------	--------------	-----------------

Battery details

**Battery capacity**

20 kWh

Operating power

14.16 kW

Battery system

Enphase Energy Inc. - 2 IQ Battery 10C

Battery mode

Savings on electricity bill

Calculations assume battery is used in

Savings on electricity bill mode at all times

Installed battery images are provided only for
representational purposes. Actual results
may vary

Cash

Old utility bill	\$590.24/month
Estimated new utility bill	\$124.79/month
Estimated bill difference	\$465.45/month

Actual new utility bill may vary if there are changes in utility rates, adjustments to energy usage, or modifications to the consumption profile.

Pricing

	Price	Total price
Base Price for Solar Based on a 12.18 kW installation	\$33,880.00	
Battery - 2 IQ Battery 10C Based on a 20 kWh installation	\$16,960.00	
Gross Cost	\$50,840.00	\$50,840.00
Cost after rebates & incentives*	\$50,840.00	\$50,840.00

Note:

* Not everyone is eligible for credits, incentives, or rebates or can fully use them. Please consult your tax professional or legal professional for further information.

* Incentives are subject to change. The actual amount can be higher or lower than what is quoted, and may not stay at a fixed rate over time. It can also change based on the tax bracket you are in.

Materials

Material	Description	Data sheet	Quantity
Panels	MSX10-435HNOB (435 Watts)	Download	28
Inverters	IQ8AC-72-M-US [240V]	Download	28
Battery	20 kWh: 2 IQ Battery 10C	Download	1

Usage Breakdown

Consumption Offset

104%

Estimated First Year Consumption

18,000.0 kWh

Estimated First Year Production

18,747.8 kWh

Estimated Savings

Assuming a 3.40% escalation rate on utility rate

Estimated Solar Savings Over 25 Years

\$196,100.25

Month-by-month details

Month (2027)	Production AC (kWh)	Grid usage (kWh)	New utility bill	Net credits (kWh)	Net savings
JAN	886.89	736.33	\$222.20	0	\$300.88
FEB	1,078.76	535.68	\$162.27	0	\$298.14
MAR	1,549.66	316.13	\$100.63	0	\$345.41
APR	1,753.89	235.7	\$83.65	0	\$371.79
MAY	2,066.32	195.08	\$67.97	0	\$448.69
JUN	2,173.81	298.18	\$98.49	0	\$616.80
JUL	2,164.69	554.68	\$161.81	0	\$717.05
AUG	2,050.32	819.28	\$93.70	0	\$729.85
SEP	1,764.29	802.3	\$210.21	0	\$572.96
OCT	1,463.95	437.9	\$34.08	0	\$428.96
NOV	987.22	604.36	\$119.38	0	\$370.20
DEC	807.98	744.42	\$143.09	0	\$384.71
Total	18,747.8 kWh	6,280.04	\$1,497.47	2,576.68 kWh	\$5,585.44

* For Net Savings, the cash price is not included in the monthly breakdown because it is assumed that it will be paid upfront (Month 0).

Benefits of Adding Battery

Battery capacity : 20 kWh **Operating power :** 14.16 kW **Battery system :**
20 kWh: 2 IQ Battery 10C

Additional bill savings using high export rates

NEM 3.0 brings changes to solar energy calculations that include on average lower export rates, but don't worry – your solar system can still be optimised to maximize its value and reduce your electricity bill. The new NEM 3.0 structure also features higher export rates that occur in specific hours, which can be factored in to save you money year-around.

Battery will provide energy to your home when solar is not present

Battery will export energy to grid during high export rate periods for additional savings

Cloudy days backup
19 Hours

Sunny days backup
7+ Days

Adding a battery provides peace of mind and energy security by keeping the lights on and the fridge running during a power outage. On a sunny day, your solar and battery will work together to maximize your backup power. On a cloudy day with little solar production, your battery backup will keep your essential appliances running.

More self-consumption
65%

Your Self Consumption score indicates how much of your power is self-generated instead of used from the utility grid. With batteries in your system, you can store the surplus solar energy produced during the day and use it to power your home at night. With your current system design, your Self Consumption score should range between 86% during summer months to 46% during winter months.

Appliances selected for back up

Mobile Charger x(4), Refrigerator x(1), Washing Machine x(2), WiFi Router x(1), Lights x(20), Vacuum Cleaner x(2), Hair Dryer x(2), Dishwasher x(2), Television x(2), Laptop / Home PC x(2), Coffee Machine x(1), Microwave x(1)
